Brainstorming & Idea Prioritization Template

Date	01 June 2026
Team ID	xxxx
Project Name	Opticrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Shashwat Sahu	The machine learning module analyzes agricultural data such as soil type, weather conditions, rainfall, and crop history.	Machine Learning	
2	K SAI SANJIT REDDY	The web application provides a user-friendly interface to predict suitable crops, visualize agricultural data, and evaluate machine learning models using its score.	Web Application & Model Evaluation	
3	B V S PARUN REDDY	The Data Visualization module presents agricultural data and model performance through interactive charts and graphs. It helps users analyze crop trends and other insights.	Data Visualization	
4				

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Build an ML-based Smart Agricultural Production Optimization System using multiple machine learning algorithms and select the best-performing model for accurate crop prediction.				
2	Develop a flask web application for crop recommendation and user interaction				
3	create an analytics dashboard for model insights and performance visualization
